Comprehension:

Read the text below and answer the questions that follow.

There is a new cell-phone ring tone that can't be heard by most people over the age of twenty, according to an NPR report. The tone is derived from something called the Mosquito, a device invented by a Welsh security firm for the noble purpose of driving hooligans, yobs, scamps, ne'er-do-wells, scapegraces, ruffians, tosspots, and bravos away from places where grownups are attempting to ply an honest trade. The device emits a seventeen kilohertz buzz, a pitch too high for older ears to register but, is ear-splitting for younger people.

A person or persons unknown have produced a copy of the Mosquito buzz for use as a cell-phone ring tone, evidently with the idea that it will enable students to receive notification of new text messages while sitting in class, without the knowledge of the teacher.

The Times, in a welcome but highly uncharacteristic embrace of anarchy, has celebrated this development as an ingenious guerrilla tactic in youth's eternal war against adult authority. But it is still not clear who is the winner? What was wrong with 'Vibrate only'?

SubQuestion No : 86

Q.8
6 Which word indicates the tone of the author in the last paragraph?
